

Pressure Sensitive Mat for Automated Computer Locking

Walk Away Computer Security

Benefits

- **Step Away Computer Locking**
- **No User Intervention Needed**
- **Hands Free Operation**
- **No Drivers Needed**
- **True Plug and Play**
- **Fully Configurable**
- **Energy Efficient**
- **Integrates With All Existing Security**
- **Uses ComputerProx's Unique KIT - Keyboard Interface Technology**

Config App Requirements

- **Windows 10, 8, 7, XP**

Device Requirements

- **Open USB Port**

The *ProxMat* pressure sensitive floor mat eliminates unattended and authorized workstations by automatically locking the PC when the user walks away. Position the *ProxMat* in front of the workstation or kiosk where the user normally stands or sits. The pressure sensitive *ProxMat* detects the user, when they step off the *ProxMat* the workstation is secured without the need of any user involvement.

The ComputerProx line of post authentication products are the only effective means of insuring compliance by eliminating reliance on the user. By automating the locking process the *ProxMat* enforces your company computer security policies.

ProxMat uses ComputerProx's unique KIT (Keyboard Interface Technology) which allows the *ProxMat* to send commands via the USB interface directly to the computer. KIT makes it simple by essentially turning the *ProxMat* into a preprogrammed USB keyboard. For example, under Windows 10 *ProxMat* can send the *CTL-ALT-DEL* sequence when the user approaches the PC. This readies the PC for password entry. When the user steps off the mat, it sends the *Windows Key + L* key sequence, thus locking the system. Order your *ProxMat* today and never leave an open and unattended computer again!

Automatic Workstation Locking

Time outs and relying on users to manually log off are ineffective and create security issues. Stop relying on these ineffective methods when the ProxMat can automatically do it for you. Strengthen your security by eliminating the user.

Meet Company Computer Policies

By automating computer locking and removing user intervention from the solution you remove one of the single biggest threat to your network, unattended and authorized workstations.

Easy Installation and Configuration

Installing the ProxMat couldn't be easier. Place the ProxMat in the area where the user would normally stand while using the workstation. Attach the ProxMat to the PC via the USB cable. The operating system will automatically detect the ProxMat as a USB keyboard and load all the necessary drivers. Use the configuration application to input the locking sequence you would normally type to lock the PC. The ProxMat is now ready to take over control and relieve the user of the locking burden.

Energy Efficient

The ProxMat saves energy and can pay for itself! The ProxMat can immediately place the workstation in standby mode when the user leaves thereby saving energy and reducing costs.

Simplify Login

The ProxMat can also be programmed to prepare the workstation when the user returns. Simply step on the ProxMat and it will initiate the login sequence.

Order Now

Save money and take control of your computers. With the ProxMat you can eliminate unattended workstations and increase user compliance to your security policies. Order your ProxMat today and immediately protect your PC's

Specifications

Power Supply

5.0V USB Port Supplied

Data

USB Port via Keystrokes

Operating Temperature

40-120F

Minimum PC Requirement

Windows 10, 8, 7, XP

Open USB Port, 200K free disk space

Certification

FCC Certification, United States

Base Part Number

RDR-PM1924-00

RDR-PM2424-00

RDR-PM2436-00

RDR-PM3332-00

Dimensions

19"x24"

24"x24"

24"x36"

33.5"x32"

Optional Surfaces

Fine Rib, Coarse Rib, Smooth, Pebbled
